

AI Risk Analyzer

MPLAD AI-powered anomaly detection system

How it works

1. Upload Dataset

Upload your MPLAD Excel or CSV file.

2. AI Screening

Machine learning checks records for unusual patterns.

3. Risk Scoring

Each record receives a risk score from 0-100.

4. Review

High-risk records are highlighted for further inspection.

An anomaly indicates a statistically unusual pattern and does not by itself prove fraud.

Connect

```
[1] !pip install -q pandas numpy scikit-learn matplotlib seaborn openpyxl
```

Import Required Libraries

```
[1] import pandas as pd
import numpy as np

import matplotlib.pyplot as plt
import seaborn as sns

from google.colab import files

from sklearn.preprocessing import StandardScaler
from sklearn.ensemble import IsolationForest

print("All libraries imported successfully!")
```

All libraries imported successfully!

Upload and Load Dataset

```
[1] !pip install python-calamine

from google.colab import files
import pandas as pd

uploaded = files.upload()

df = pd.read_excel(
    "Allocated Limit for Honble MPs.xlsx",
    engine="calamine"
)
```
